

WESTINGHOUSE CONTINUES

to fuel the UK's nuclear future from Lancashire.

WESTINGHOUSE ELECTRIC COMPANY LLC

Westinghouse has underlined its commitment to the UK's nuclear power industry by securing the long-term future of the nation's biggest nuclear fuel manufacturing site — Springfields near Preston in Lancashire.

Under a pioneering agreement with the Nuclear Decommissioning Authority (NDA), Westinghouse will manage and operate the facility well into the next century. The agreement highlights Springfields' strategic importance in the UK's ambitious plans to build new nuclear power plants.

Paving the way for significant investment that will maintain high quality jobs, security for current employees and may in the long term bring new job opportunities to the site, the agreement will allow us to build on new business opportunities during the nuclear renaissance and ensure that Lancashire stays at the forefront of nuclear fuel technology development.

Through our focus at Springfields, Westinghouse continues to help find solutions to growing demands for clean, safe and reliable electricity for future generations.
